Concepts • Consensus

The Confidential

Mixed-use High Rise

| Architectural Design, Art Coordination, BIM Lead

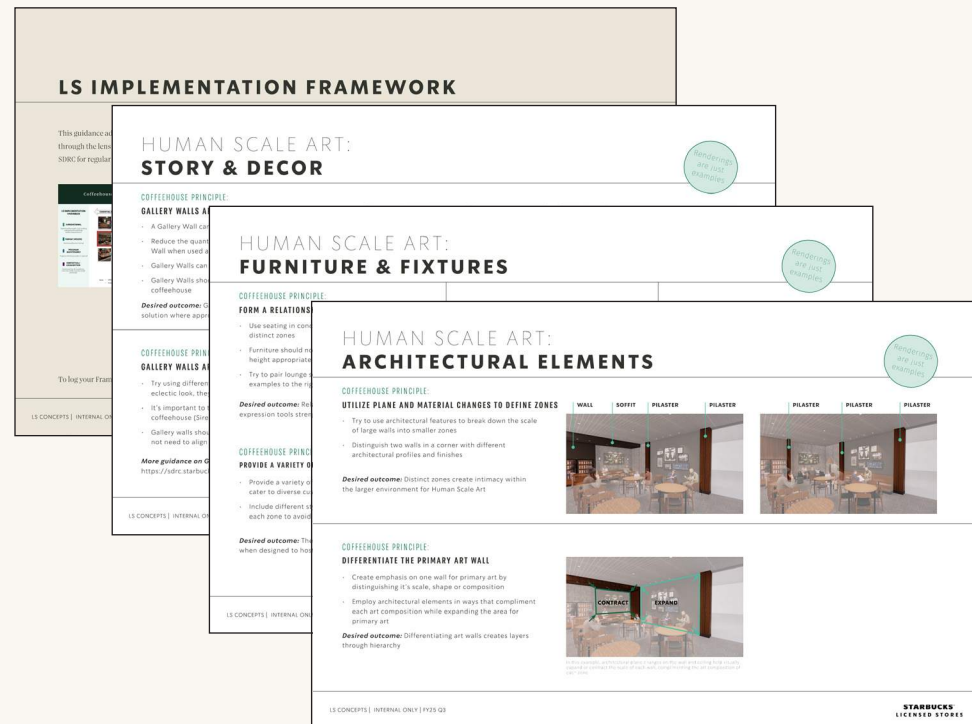

This high rise presented me with a big opportunity to anchor the design team from concept to construction, even acting as a touchpoint in marketing and financing meetings. To reduce internal shafts and capture more rooftop amenity we placed small HVAC units in a void running the height of the building. An Artist and I then turned a necessary screen into a 23 story sculpture that adds value inside and out.

Back to Starbucks

Licensed Stores Business

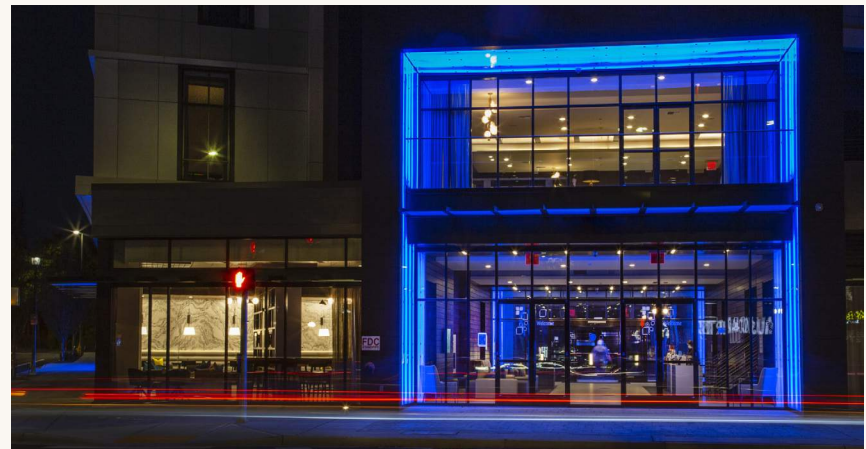

Design Guidance, Program Implementation

My work to adapt *Back to Starbucks* design strategies for our Licensed Segments is proof that anything is possible when we work together. I led our cross functional orgs to consensus around a more layered approach to Store Design through conceptual work, flexible frameworks and a showcase for our Licensees. Then I authored design guidance to help teams implement these new layers in a variety of circumstances unique to the markets our business operates in.

Hilton *Canopy Brand* Pilot

Hospitality | Architectural Design, BIM Lead, Prototype Implementation

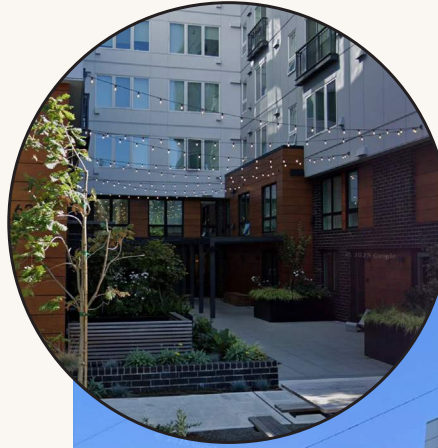

My team implemented new standards for a hotel brand that reflected the unique, expansive program desired on exurban sites such as this one in downtown Redmond. We developed a central loggia that bisects the mass to provide access into and across the hotel, restaurant and conference program. I was responsible for Interior, Lighting, Structural and architectural coordination.

Multifamily Work

Mid-Rise

| Architectural Design, Art Coordination, BIM Lead

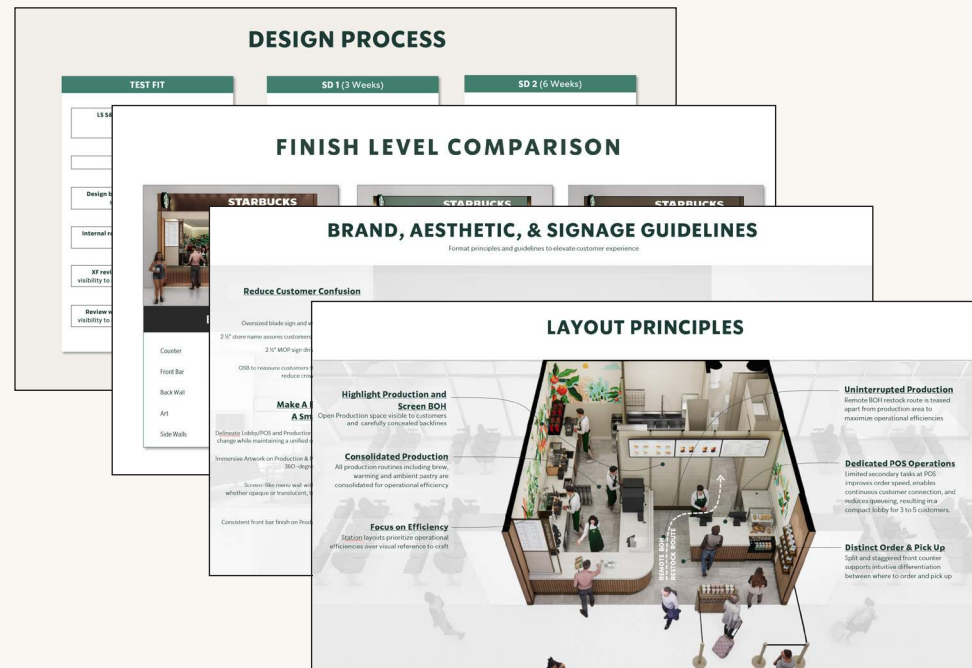

Every community deserves great design. That's a principle I stand by when working on any project but especially in my multifamily work. I've had the pleasure of being on the design team of several mid-rise buildings intended to house affordable and market rate apartments, as well as senior living facilities. I gained experience with Schematic design, BIM Modeling, MEP coordination, Landscape Architecture, Architectural detailing, Interior detailing and Construction Administration throughout these projects.

New Format Development & Pilot

QSR

| Format Concept, Pilot Program, Commercialization

My team developed a patented new QSR format for Starbucks, adapting existing casework for a compact layout while maintaining our full Cafe menu offering. Our focus on operations lowered Barista step count and increased order throughput by 20% - making this the most efficient store format per square foot in the portfolio. I contributed to the Concept design and then led the Pilot Program, working with cross functional teams to locate and test fit over 100 stores. Simultaneously, I built out the suite of digital assets and design guidance required for widespread commercial launch.

Seattle Monorail

Transit Station

| Brand Repositioning, BIM Lead, Construction Administration

Our team remodeled the Westlake Monorail Station in conjunction with the opening of Seattle's NHL Arena. I helped implement and adjust the conceptual design while managing a complex BIM model with both historical and new data. I was also the primary respondent for RFI's from multiple stakeholders on a very tight deadline, even working in the field to resolve tricky issues elegantly.
